

Olvasd el a ragasztási tanácsokat is!

A többiekét ragaszd jobb oldalra, a füle mögé! Az eredeti gumiszerű rész legyen felül, a szíke alul!

A hátsóhidakat ragaszd a kerekek belső felére levő piros keretrel! A differenciálmű jobb oldalra van eltolva!

A hátsó hídát összeragaszthatod az előző sablonból is, de ha az nem jön ki jól, akkor ezennél E-rod összeragasztást érdemes használni! A két végükre meg ragaszd a felület részket, és ugyanígy az eredményt kapod!

4 dőtkerek

Ez a felhő belső felére kell!
